

Issue Key	Module	Release Note
NCCB-56227	bacnet	Previously, a value of 4194303 (the unconfigured instance number) would be rejected as out of range when written to the notification class property of an event enrollment object. Now, that value is accepted and causes the associated alarm source ext's alarm class to be set to an empty string. No events from the event enrollment object will be visible through BACnet when the notification class is set to 4194303.
NCCB-51869	bajaux, uxBuilder	When the visibility attribute of a child of a FlowPane is animated, the space used by a widget will no longer sit empty when it is hidden.
NCCB-57748	jxBrowser	In any Niagara version that uses JxBrowser 7.22 to 7.25 (4.11U1 and some EA versions), if you change a <select> in a Wb WebWidget was incorrectly focusing on the previous input and removed that input's select value.
NCCB-57372	platCrypto	Under some conditions, the Session Info dialog would state the hostname as being unverified when it had passed verification. This has been corrected in Niagara 4.11u2 and later.
NCCB-57246	schedule	Previously in UxMedia, when you viewed a Schedule output on a Bound Label, the facets would not be respected. This has now been corrected.
